-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Non-Final Rejection

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Oishi (US 5,708,547).

Claim 1, Oishi shows a disk cartridge in Fig. 1 including a casing 11 in which a flexible information recording disk 2 (Column 3, line 23) is housed, and a liner 8 (Column 3, line 48) which is fixed to an inner surface of the casing interposed between the disk and the casing at a site opposed to the disk in order to clean the surface of the disk, wherein the liner is supported away from the inner surface of casing or the shutter member so that the liner can be deflected when the disk is brought into abutment against the liner due to impact applied to the disk cartridge.

Claim 2, Oishi further shows the liner is supported on the inner surface of the casing by way of protrusion 10a and 10b formed on the inner surface of the casing.

Claim 3, Oishi further shows in Fig. 2 that the liner is supported on the inner surface of the casing or the shutter member by fixing the inner periphery and the outer periphery thereof respectively to an inner annular protrusion 10b and an outer

annular protrusion 10a formed on the inner surface of the casing or the shutter member concentrically with the disk.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 4-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Oishi in view of Hales (US 6,256,168).

Claims 4 and 6, Oishi further shows that the liner formed of nonwoven fabric (Column 3, lines 48-49), but does not specify the thickness.

Hales et al shows a cartridge, wherein the liner is made of a commercial available material with thickness between 1.5 to 3.5 mils (Column 5, line 60 to column 6, line 2), which corresponds 38 to 90 μm covering the range of 40 to 80 μm . It would have been obvious at the time the invention was made to one of ordinary skill in the art to use this commercially available material for the liner in Oishi's cartridge.

Claims 5 and 7, in above constructed device, the liner is lower in rigidity than the disk.

Conclusion

4. The prior art made of record in PTO 892 Form and not relied upon is considered pertinent to applicant's disclosure.
